EXPERIENCE

Veruska   March 2023 - May 2023

- In this job i was in charge, together with a colleague of the frontend of the page, we worked as a team, and we had very good communication with the entire team, the project had people in charge of the UI of the page, and we based on the models build the page, it was a wonderful experience, from wich i learned a lot.

- Throughout the project journey we work with React and Tailwid.

Rosario Bus Terminal   October 2021 - February 2023

- Ticketing supervisor, ticket sales, trip coordination, cash handling and reconciliation, customer service.

Pet Shop   December 2019 - October 2021

- Customer service, sales of pets products and food.

Carpentry   January 2018 - December 2019

- Skilled labor in manufacturing of goods, proficiency in handling tools and machinery, customer service excellence.

EDUCATION

Coderhouse   November 2022 - Jan 2023

- In this course, I had the opportunity to create an e-commerce website using React and Firebase, which allowed me to further enhance my skills in React.

University National of Rosario   March 2021 - December 2021
Fullstack Developer

- Learned the basics of programming in Java, with a focus on object-oriented programming.
- Greatly improved my soft skills by working in teams that rotated frequently, which enhanced my adaptability and teamwork abilities.
- Knowledge of Java, Spring Boot, MySQL, Thymeleaf, HTML, CSS, Javascript, React.

Technical School N° 466   March 2012 - Dec 2018
Electromechanical technician

- Electrical and mechanical knowledge, secure methodologies, machinery, CNC.

PROJECTS

Gif Search
- Built a website for search any gifs, with React and Giphy API.
- The website incorporates a range of features, including lazy loading, infinite scrolling, testing, debounce, masonry, useMemo, Memo, useCallback, React Router, and React Helment.

E-commerce
- Developed an e-commerce platform with gaming theme using React and Firebase.

- Includes features such as user registration and login using Firebase, email verification and a cart/user global Context.

Lofi Music
- Designed a website for listening to lo-fi music, using only React.

- Additional features include ambient sounds such as rain and birds, as well as caching of music and the ability to change the background.

Background Remover
- Created an application using React and the Cloudinary API that can remove the background from any image.

- Application includes a loading feature that displays the original image in a blurred state while the image is being processed to remove the background. It also features a drop-zone for users to upload their desired image.

Component Generator
- I built a website where you can describe the components you want, and select the framework and language, the website will generate the code for your component, also allows you to preview the code and see how the component will look. Using React and the OpenAI API.

Google Translate
- Developed a Google Translate component that allows users to auto-detect their language or manually select it, as well as choose the translation language. Once the translation is complete, users can also see and listen to it.
